

Precision Operational Amplifier, 10 μ V, Zero-Drift, 1.6 V to 5.5 V Supply, 1.5 MHz

NCS21801, NCS21802, NCS21803, NCS21804

The NCS21801, NCS21802, NCS21803, and NCS21804 are precision op amps featuring low input offset voltage and low offset drift over time and temperature. The common mode voltage range extends 100 mV beyond the supply rails, which makes it suitable for both high-side and low-side current sensing applications.

The NCS2180x is available in single, dual, and quad channel configurations. All versions are specified for operation from -40°C to $+125^{\circ}\text{C}$. NCV prefix parts are automotive grade 1 qualified and offer performance over the extended temperature range from -40°C to $+150^{\circ}\text{C}$.

Features

- Input Offset Voltage: $\pm 10 \mu\text{V}$ max
- Offset Voltage Drift Over Temperature: $\pm 5 \text{ nV}/^{\circ}\text{C}$ Typical
- Common Mode Input Voltage Range: $V_{\text{SS}} - 0.1 \text{ V}$ to $V_{\text{DD}} + 0.1 \text{ V}$
- Supply Voltage Range: 1.8 V to 5.5 V
- Extended Supply Voltage Range: 1.6 V to 5.5 V for $T_{\text{A}} = 0^{\circ}\text{C}$ to 85°C
- Unity Gain Bandwidth: 1.5 MHz
- Quiescent Consumption: 100 μA Max per Channel
- Enable Function Available on NCS21803
- NCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q100 Qualified and PPAP Capable
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

Applications

- High-Side Current Sensing
- Low-Side Current Sensing
- Difference Amplifier
- Instrumentation Amplifier
- Power Management
- Automotive

DEVICE MARKING INFORMATION

See general marking information in the device marking section on page 2 of this data sheet.

PIN CONNECTIONS

See pin connections on page 3 of this data sheet.

ORDERING INFORMATION

See detailed ordering and shipping information on page 2 of this data sheet.

MAXIMUM RATINGS (Note 1)

Parameter	Symbol	Rating	Unit
Supply Voltage ($V_{DD} - V_{SS}$) (Note 1)	V_S	-0.3 to 6	V
Input Voltage (Note 2)	V_{IN+}, V_{IN-}, V_{EN}	$(V_{SS} - 0.3)$ to $(V_{DD} + 0.3)$	V
Differential Input Voltage	V_{IN+}, V_{IN-}	$\pm (V_{DD} - V_{SS} + 0.3)$	V
Output Voltage (Note 2)	V_{OUT}	$(V_{SS} - 0.3)$ to $(V_{DD} + 0.3)$	V
Output Short Circuit Current (Note 3)	I_{OUT}	Continuous	
Input Current into Any Pin (Note 2)	I_{IN}	± 10	mA
Maximum Junction Temperature	$T_{J(max)}$	+150	°C
Storage Temperature Range	T_{STG}	-65 to +150	°C
ESD Human Body Model (Note 4)	HBM	± 2000	V
Charged Device Model (Note 4)	CDM	± 1000	V
Latch-up Current (Note 5)		100	mA

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Refer to ELECTRICAL CHARACTERISTICS, RECOMMENDED OPERATING RANGES and/or APPLICATION INFORMATION for safe operating parameters
2. Terminals are diode-clamped to the power-supply rails. Input signals that can swing more than 0.3 V beyond the supply rails should be current limited to ± 10 mA or less. Output terminals should not be driven by external sources.
3. Short circuits to either rail can cause an increase in the junction temperature. The total power dissipation must be limited to prevent the junction temperature from exceeding the 150°C limit.
4. This device series incorporates ESD protection and is tested by the following methods:
ESD Human Body Model tested per JEDEC standard JS-001-2017 (AEC-Q100-002)
ESD Charged Device Model tested per JEDEC standard JS-002-2014 (AEC-Q100-011)
5. Latch-up Current tested per JEDEC standard: JESD78E.

THERMAL CHARACTERISTICS (Notes 6, 7)

Package	θ_{JA} Junction-to-Ambient Thermal Resistance	Ψ_{JT} Junction-to-Case Top Thermal Characteristic	Ψ_{JB} Junction-to-Board Thermal Characteristic	Unit
TSOP-5 / SOT23-5	188	26	38	°C/W
SC70-5 / SC-88-5 / SOT-353-5	241	46	64	
SC-88 / SC70-6 / SOT-363	230	45	60	
UDFN8	105	10	51	
Micro8 / MSOP-8	105	24	96	
TSSOP-14	86	9	53	

6. Refer to ELECTRICAL CHARACTERISTICS, RECOMMENDED OPERATING RANGES and/or APPLICATION INFORMATION for safe operating parameters
7. Mounted on a JESD51-7 thermal board, 2S2P, 1 in² copper spreader area, 1 oz signal plane thickness

RECOMMENDED OPERATING RANGES

Parameter	Symbol	Conditions	Min	Max	Unit
Ambient Temperature	T_A	NCS prefix	-40	125	°C
		NCV prefix	-40	150 (Note 8)	
Common Mode Input Voltage	V_{CM}	Full temperature range	$V_{SS} - 0.1$	$V_{DD} + 0.1$	V
Supply Voltage ($V_{DD} - V_{SS}$)	V_S	$T_A = 0$ to 85°C	1.6	5.5	V
		Full temperature range	1.8	5.5	

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

8. Operation up to $T_A = 150^\circ\text{C}$ is permitted, provided the total power dissipation is limited to prevent the junction temperature from exceeding the 150°C absolute maximum limit.

NCS21801, NCS21802, NCS21803, NCS21804

ELECTRICAL CHARACTERISTICS At $T_A = +25^\circ\text{C}$, $V_S = 1.8\text{ V}$ to 5.5 V , and $V_{CM} = V_{OUT} = \text{mid-supply}$, unless otherwise noted.
Boldface limits apply over the specified temperature range, unless otherwise noted, guaranteed by characterization and/or design.

Parameter	Symbol	Conditions	Temp ($^\circ\text{C}$)	Min	Typ	Max	Unit
INPUT							
Input Offset Voltage	V_{OS}	$V_S = 3.3\text{ V}$	25		± 2	± 10	μV

APPLICATIONS INFORMATION

The NCS21801, NCS21802, NCS21803, and NCS21804 precision amplifiers feature low input offset voltage and zero-drift over temperature. The input common mode voltage range extends 100 mV beyond the rails, allowing for measurements at ground or the supply voltage. These characteristics make the NCS21801 series well-suited for applications such as current sensing and sensor interface. The NCS21803 additionally features an enable pin that allows the amplifier to enter shutdown mode to reduce current consumption in low power applications.

Architecture

The low input offset voltage and zero-drift characteristics of amplifiers in the NCS21801 series is achieved through the chopper-stabilized architecture. Unlike the classical chopper architecture, the chopper-stabilized architecture has two signal paths to take advantage of both precision and speed.

Figure 44. Simplified Schematic of the Chopper-stabilized Amplifier Architecture

In Figure 44, the lower signal path is where the chopper samples the input offset voltage, which is then used to correct the offset at the output. The offset correction occurs at a frequency of 100 kHz. Due to this periodic sampling, the chopper-stabilized architecture is optimized for best performance at frequencies up to the related Nyquist frequency (1/2 of the offset correction frequency). As the signal frequency exceeds the Nyquist frequency, 50 kHz, aliasing may occur at the output. This is an inherent limitation of all chopper and chopper-stabilized architectures. Nevertheless, the NCS2180x is designed to minimize aliasing beyond the Nyquist frequency. ON Semiconductor's patented approach utilizes two cascaded, symmetrical, RC notch filters tuned to the chopper frequency and its fifth harmonic to reduce aliasing effects.

The feed-forward path, which is shown as the upper signal path of the block diagram in Figure 44, is the high speed signal path that extends the gain bandwidth to 1.5 MHz. Not only does this help retain high frequency components of the input signal, but it also improves the loop gain at low frequencies. This is especially useful for low-side current sensing and sensor interface applications

where the signal is low frequency and the differential voltage is relatively small.

Both internal amplifiers have specialized circuitry to maintain nearly constant bandwidth, noise, and slew rate over the entire common mode voltage range. This also improves the overall input offset voltage, PSRR, and CMRR performance, while significantly reducing the THD+noise level. These characteristics are very useful in signal processing.

Input Offset Voltage

Input offset voltage is an intrinsic op amp characteristic that arises from mismatches in the IN+ and IN- paths. Since the NCS2180x series amplifiers have such low input offset voltage to begin with, external factors can have a non-trivial contribution to the effective input offset voltage. Conditions created by the physical environment can create package stress, thereby influencing the input offset voltage. These factors include air flow and PCB construction. Taking these factors into consideration, the input offset voltage performance should be validated in the application environment.

EMIRR

The NCS21801 series has built-in input filters to reduce high frequency EMI frequency signals before they enter the amplifier. Under normal circumstances, P-N junctions within the silicon can rectify these high frequency signals, and the effect can be seen as a DC offset at the output. Since this added offset can have a noticeable effect on high precision measurements, EMI rejection ratio (EMIRR) can be used to quantify the robustness of an amplifier to these signals.

Enable Function

The enable pin on NCS21803 allows the user to put the amplifier into shutdown mode when it is not in use. Setting EN to the logic low level reduces the current consumption down to less than 300 nA, which is useful for portable and

battery-powered applications. The output becomes high impedance. Setting the EN pin to logic high enables the output again, with the output reaching the final value ($\pm 1\%$) according to the specified enable time. A floating EN pin results in an indeterminate output state.

Layout Recommendations

Bypass capacitors of 0.1 μF to ground should be placed as close as possible to the supply pins.

The UDFN8 package has an exposed leadframe die pad on the underside of the package. This pad should be soldered to the PCB, as shown in the recommended soldering footprint in the Package Dimensions section of this datasheet. The center pad can be electrically connected to VSS or it may be left floating. When connected to VSS, the center pad acts as a heat sink, improving the thermal resistance of the part.

onsemi and onsemi are trademarks of Semiconductor Components Industries, LLC dba onsemi or its subsidiaries in the United States and/or other countries. onsemi reserves the right to make changes without further notice to any products herein. onsemi makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does onsemi assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. onsemi does not convey any license under its patent rights nor the rights of others.

onsemi, **Onsemi**, and other names, marks, and brands are registered and/or common law trademarks of Semiconductor Components Industries, LLC dba "**onsemi**" or its affiliates and/or subsidiaries in the United States and/or other countries. **onsemi** owns the rights to a number of patents, trademarks, copyrights, trade secrets, and other intellectual property. A listing of **onsemi**'s product/patent coverage may be accessed at www.onsemi.com/site/pdf/Patent-Marking.pdf. **onsemi** reserves the right to make changes at any time to any products or information herein, without notice. The information herein is provided "as-is" and **onsemi** makes no warranty, representation or guarantee regarding the accuracy of the information, product features, availability, functionality, or suitability of its products for any particular purpose, nor does **onsemi** assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation special, consequential or incidental damages. Buyer is responsible for its products and applications using **onsemi** products, including compliance with all laws, regulations and safety requirements or standards, regardless of any support or applications information provided by **onsemi**. "Typical" parameters which may be provided in **onsemi** data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. **onsemi** does not convey any license under any of its intellectual property rights nor the rights of others. **onsemi** products are not designed, intended, or authorized for use as a critical component in life support systems or any FDA Class 3 medical devices or medical devices with a same or similar classification in a foreign jurisdiction or any devices intended for implantation in the human body. Should Buyer purchase or use **onsemi** products for any such unintended or unauthorized application, Buyer shall indemnify and hold **onsemi** and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that **onsemi** was negligent regarding the design or manufacture of the part. **onsemi** is an Equal Opportunity/Affirmative Action Employer. This literature is subject to all applicable copyright laws and is not for resale in any manner.
